

# Impossibly comfortable, impossibly clear.

Treat yourself to superior comfort and vision.

You work all day. You go out at night. You want contact lenses that bathe your eyes with comfort that lasts as long as you do. In short: You want Biofinity contacts. These lenses are naturally wettable.

SILICONE HYDROGEL  
THIRD GENERATION™

## Impossibly comfortable, made possible by exclusive Aquaform® Comfort Science™.

### Highly Oxygen Transmissibility

Increased breathability (Dk/t=160@ - 3.00D) for daily wear, helping maintain healthier corneal physiology

### Naturally and Uniformly Wettable

Stays moist without other additives, wetting agents or surface treatments, helping minimize deposits and maximize comfort

### Optimum Modulus

Soft and flexible

## Impossibly comfortable, impossibly clear. Made possible for patients with astigmatism.

### Highly Oxygen Transmissibility

Increased breathability (Dk/t=160@ - 3.00D) for daily wear, helping maintain healthier corneal physiology

### Naturally and Uniformly Wettable

Stays moist without other additives, wetting agents or surface treatments, helping minimize deposits and maximize comfort

### Optimum Modulus

CooperVision®

# Proclear Family

Explore a wide range of contacts designed for wearers who experience issues with dryness.

The only daily contact lenses with Phosphorylcholine (PC Technology™) – a unique process that naturally attracts water. Lenses stay moist and comfortable, even after 12 hours. Your dry eyes will love the hydration

**PC Technology**

A technology that causes water molecules to actually become a part of the lens, creating a natural resistance to dryness.

## Correct Nearsighted or Farsighted Vision

Do you find you have gritty, red eyes when wearing contacts? Changing your contact lenses often may help you get rid of proteins and allergens before they have time to build up on your lenses.

### AT A GLANCE

- Stay 96% hydrated throughout the day, even after 12 hours of wear
- Maintain oxygen flow to help keep your eyes clear and white
- May help address eye dryness when wearing contact lenses

## Focus Up Close, Far Away and In-Between

If you're age of 40 to 45, you may have noticed that your vision is blurry when looking at objects up close. This condition is called "presbyopia" and it affects everyone.

With CooperVision Proclear® 1 day multifocal contact lenses, you can now enjoy the clear vision you need, whether you're reading an email on your phone, working on your PC, or trying to read a billboard in the distance.

### AT A GLANCE

- Stay 96% hydrated throughout the day, even after 12 hours of wear
- Provide clear vision at all distances
- May help address eye dryness when wearing contact lenses
